/done libe "Sugano SuD adult male".
//done "Vector: pMB18S-F13; Site 1: Drall1 (CACCATGTG); Site 2: Drall1 (CACTGTGG); Libe 1: Drall1 (CACTGTGG); Mile an oligo(dT) primer [ATGGCCTTTTTTTTTTTTTTT];
//double-stranded cDMA was ligated to a Drall1 adaptor [TGTTGGCCTACTGG], digested and cloned into distinct Drall1 sites of the pME18s-F13 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert: Size selection was performed to exclude fragments cl. Skb. Library constructed and donated by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CTGCTGTAAAACTGC and 3' end primer CGACCTGCAGCACA."

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
from the whole human genome sequences using our automated
                     system that contains programs of gene finding (GeneDecoder), sequence search, motif-domain assignment and transmembrane helix prediction.

And the sequence is submitted by the collaborative project between [Computational Biology Research Center (CBRC), National Institute of Advanced Industrial Science and Technology (AIST)] and [Genome Science Division, Research Center for Advanced Science and Technology (RCAST), University of Tokyo].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cécnéciastrecreatrescriscearingent de 436

```
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tatanes, M., Catanese, J.J., and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       There are polymorphic base pair differences in the overlaps between the clones RPI1-425F6, RPI1-28H22, and RPI1-425F6. The region is covered by a single clone; the fidelity of the sequence cannot be guaranteed. The length of sequence is consistent with PCR from clone DNA, and corresponds to restriction digest information: hindIII band size 5664 in silico, and 5694 real.
                                                                                                                                                                                                                                                                                                                                                                                                      The clone sequenced to the left is RP11-425F6, 200 bp overlap, clone sequenced to the right is RP11-98C1, 200 bp overlap. Act start of this clone is at base position 157644 of RP11-425F6; actual end is at base position 21685 of RP11-98C1.
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. L MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Center project name: H_NH0028H22

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: This is a 'working draft' sequence. It currently consists of 55 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as truns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
       Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo
